# Assignment 3

## Assignment Overview:

The goal of this assignment is to use a hardening guideline to determine where your VM or personal device is in regard to that guideline. This task involves researching hardening guidelines and using at least two different guidelines. The final deliverable will be a report including screenshots of your scores from both guidelines created. Further details are included below.

## Main Tasks:

This assignment will encompass the following tasks:

1. Research and identify hardening guidelines and automated tools for assessment.
2. Install an automated tool to assist with guideline assessment on one of your VMs from the previous assignment or your personal machine if interested.
3. Perform a scan using the DISA STIG and one other guideline.
4. Create a report with screenshots of your results from the scans performed.

## DISA STIG

For the first security scan, I used the Security Technical Implementation Guide (DISA STIG) with the SCAP Compliance Checker tool. I downloaded the STIG package from the \*\*Defense Information Systems Agency cyber.mil website and selected the version for Rocky Linux 9. After downloading it, I extracted the files and compiled it through the command line. Once the tool opened, I selected the RHEL 9 STIG benchmark and started the scan using the Start Scan option. The program scanned my system and then showed a results page with the compliance score and the list of passed and failed checks.

## Results: High Severity (CAT I)

### Automated Checks

- o V-257777 - RHEL 9 must be a vendor-supported release. - Fail
- o V-257784 - The systemd Ctrl-Alt-Delete burst key sequence in RHEL 9 must be disabled. - Fail
- o V-257785 - The x86 Ctrl-Alt-Delete key sequence must be disabled on RHEL 9. - Fail
- o V-257820 - RHEL 9 must check the GPG signature of software packages originating from external software repositories before installation. - Pass
- o V-257821 - RHEL 9 must check the GPG signature of locally installed software packages before installation. - Fail
- o V-257822 - RHEL 9 must have GPG signature verification enabled for all software repositories. - Pass
- o V-257826 - RHEL 9 must not have a File Transfer Protocol (FTP) server package installed. - Pass
- o V-257835 - The Trivial File Transfer Protocol (TFTP) server must not be installed unless it is required, and if required, the RHEL 9 TFTP daemon must be configured to operate in secure mode. - Not Applicable
- o V-257955 - There must be no shosts equiv files on RHEL 9. - Pass
- o V-257956 - There must be no shosts files on RHEL 9. - Pass
- o V-257984 - RHEL 9 SSHD must not allow blank passwords. - Fail
- o V-257986 - RHEL 9 must enable the Pluggable Authentication Module (PAM) interface for SSHD. - Pass
- o V-258018 - RHEL 9 must not allow unattended or automatic login via the graphical user interface. - Fail
- o V-258059 - The root account must be the only account having unrestricted access to RHEL 9 system. - Pass
- o V-258078 - RHEL 9 must use a Linux Security Module configured to enforce limits on system services. - Pass
- o V-258094 - RHEL 9 must not allow blank or null passwords. - Fail
- o V-258230 - RHEL 9 must enable FIPS mode. - Fail
- o V-258236 - RHEL 9 cryptographic policy must not be overridden. - Fail

### Manual Checks

- o V-257789 - RHEL 9 must require a unique superusers name upon booting into single-user and maintenance modes. - Not Checked
- o V-257879 - RHEL 9 local disk partitions must implement cryptographic mechanisms to prevent unauthorized disclosure or modification of all information that requires at rest protection. - Not Checked

## Results: Medium Severity (CAT II)

### Automated Checks

- o V-257781 - The graphical display manager must not be the default target on RHEL 9 unless approved. - Fail
- o V-257783 - RHEL 9 systemd-journald service must be enabled. - Pass
- o V-257786 - RHEL 9 debug-shell systemd service must be disabled. - Fail

## Guide to the Secure Configuration of Red Hat Enterprise Linux 9

with profile **CIS Red Hat Enterprise Linux 9 Benchmark for Level 1 - Server**

— This profile defines a baseline that aligns to the “Level 1 - Server” configuration from the Center for Internet Security® Red Hat Enterprise Linux 9 Benchmark™, v2.0.0, released 2024-06-20.

This profile includes Center for Internet Security® Red Hat Enterprise Linux 9 CIS Benchmarks™ content.

The SCAP Security Guide Project

<https://www.open-scap.org/security-policies/scap-security-guide>

This guide presents a catalog of security-relevant configuration settings for Red Hat Enterprise Linux 9. It is a rendering of content structured in the eXtensible Configuration Checklist Description Format (XCCDF) in order to support security automation. The SCAP content is available in the [scap-security-guide](#) package which is developed at <https://www.open-scap.org/security-policies/scap-security-guide>.

Providing system administrators with such guidance informs them how to securely configure systems under their control in a variety of network roles. Policy makers and baseline creators can use this catalog of settings, with its associated references to higher-level security control catalogs, in order to assist them in security baseline creation. This guide is a *catalog*, not a *checklist*, and satisfaction of every item is not likely to be possible or sensible in many operational scenarios. However, the XCCDF format enables granular selection and adjustment of settings, and their association with OVAL and OCIL content provides an automated checking capability. Transformations of this document, and its associated automated checking content, are capable of providing baselines that meet a diverse set of policy objectives. Some example XCCDF *Profiles*, which are selections of items that form checklists and can be used as baselines, are available with this guide. They can be processed, in an automated fashion, with tools that support the Security Content Automation Protocol (SCAP). The DISA STIG, which provides required settings for US Department of Defense systems, is one example of a baseline created from this guidance.

Do not attempt to implement any of the settings in this guide without first testing them in a non-operational environment. The creators of this guidance assume no responsibility whatsoever for its use by other parties, and makes no guarantees, expressed or implied, about its quality, reliability, or any other characteristic.

| stigref          | SV-258137r1102081_rule                                                                                                                                                                                                                                                   |  |      |                    |        |                          |     |       |        |                |         |                        |
| Description      | The operating system file integrity tool must be configured to protect the integrity of the audit tools.                                                                                                                                                                 |  |      |                    |        |                          |     |       |        |                |         |                        |
| Rationale        | Protecting the integrity of the tools used for auditing purposes is a critical step toward ensuring the integrity of audit information. Audit information includes all information (e.g., audit records, audit settings, and audit reports) needed to successfully audit |  |      |                    |        |                          |     |       |        |                |         |                        |

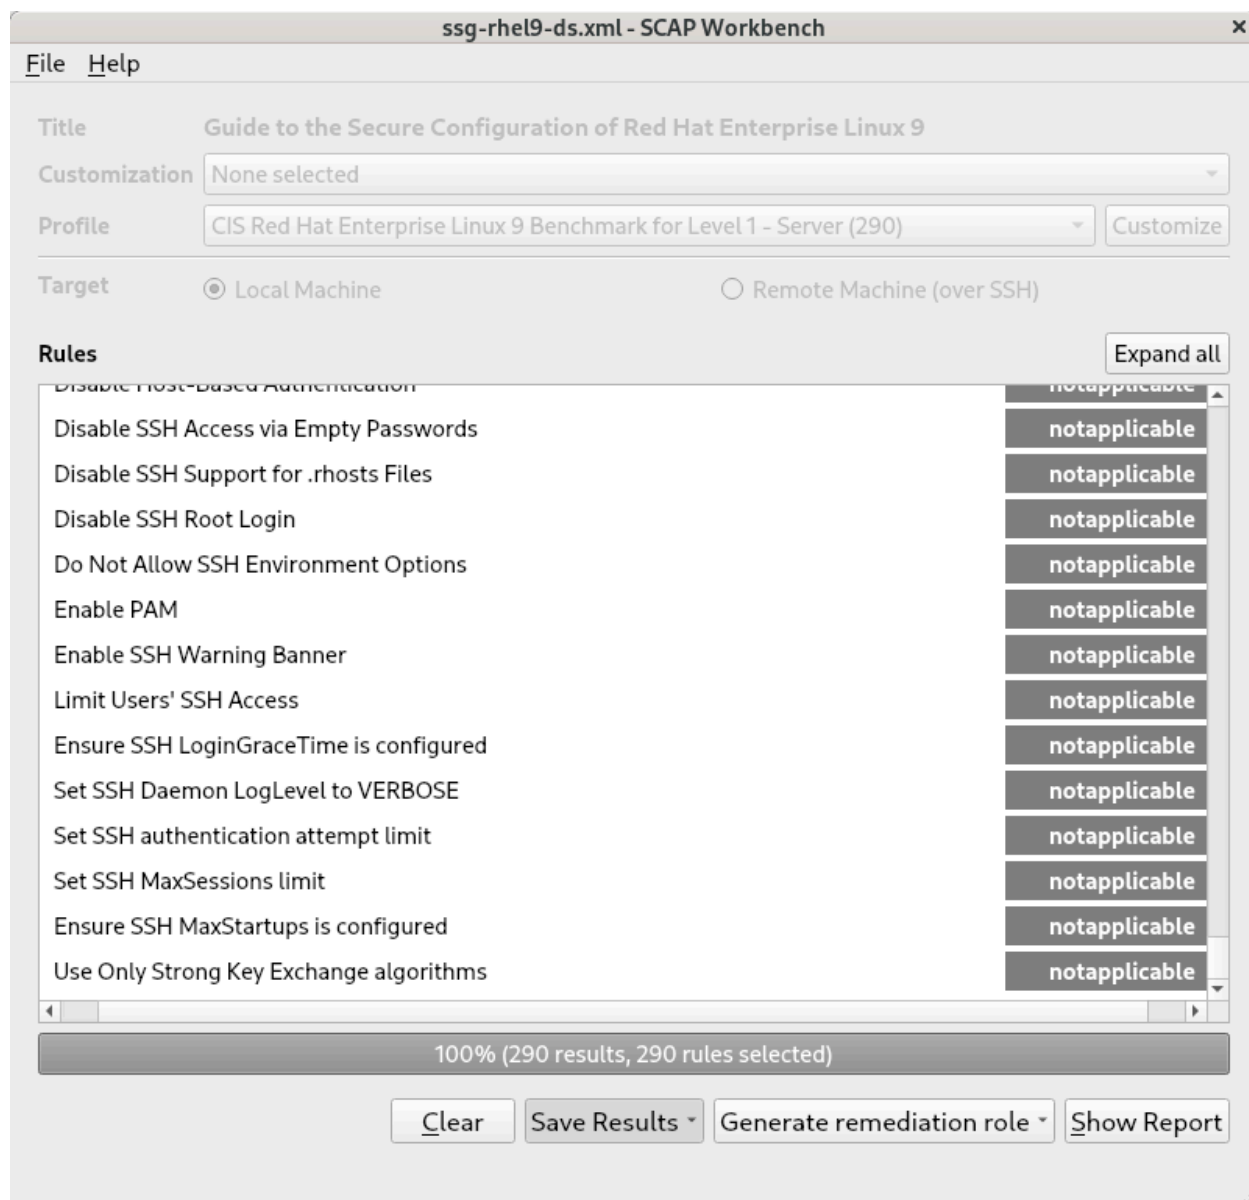

For the second guideline, I used the CIS Benchmark from the Center for Internet Security. Since the SCAP Compliance Checker GUI did not show CIS profiles, I used OpenSCAP through the command line. First, I installed the official SCAP security benchmark package and verified that the benchmark file existed on my system. After that, I checked the available profiles and found the CIS Level 1 Server profile. I then ran the scan, which compared my system settings to the CIS security recommendations and generated a report showing the results. Here is the command i used:

```
sudo oscap xccdf eval \  
--profile xccdf_org.ssgproject.content_profile_cis_server_l1 \  
--results cis-results.xml \  
--report cis-report.html \  
/usr/share/xml/scap/ssg/content/ssg-rhel9-ds.xml
```

## With Workbench

The screenshot shows the SCAP Workbench application window. The title bar reads "adones@localhost:~ — scap-workbench". The interface is divided into two main panes. The left pane, titled "adones@localhost:/opt/scp — sudo /opt/scp/scp", displays a list of installed packages and their versions, along with a list of installed profiles. The right pane, titled "adones@localhost:~ — scap-workbench", displays the results of a SCAP scan. The results are organized into three columns: "Installed:", "Warning:", and "Error:". The "Installed:" column lists various packages and their versions, including "adwaita-gtk2-theme-3.28-14.el9.0.1.x86\_64", "efi-srpm-macros-6-4.el9.noarch", "gdb-minimal-16.3-2.el9.x86\_64", "gtk2-2.24.33-8.el9.x86\_64", "libcanberra-gtk2-0.30-27.el9.x86\_64", "openblas-srpm-macros-2-11.el9.noarch", "patch-2.7.6-16.el9.x86\_64", "pyproject-srpm-macros-1.16.2-1.el9.noarch", "qt5-qtbase-5.15.9-11.el9.6.x86\_64", "qt5-qtdeclarative-5.15.9-3.el9.x86\_64", "redhat-rpm-config-210-1.el9.noarch", "rust-srpm-macros-17-4.el9.noarch", "xcb-util-keysyms-0.4.0-17.el9.x86\_64", "zstd-1.5.5-1.el9.x86\_64", "debugedit-5.0-11.el9.x86\_64", "elfutils-0.193-1.el9.x86\_64", "ghc-srpm-macros-1.5.0-6.el9.noarch", "ibus-gtk2-1.5.25-6.el9.x86\_64", "lua-srpm-macros-1-6.el9.noarch", "openscap-utils-1:1.3.13-1.el9.7.rocky.0.1.x86\_64", "pcre2-utf16-10.40-6.el9.x86\_64", "python-srpm-macros-3.9-54.el9.noarch", "qt5-qtbase-common-5.15.9-11.el9.6.noarch", "qt5-qtxmlpatterns-5.15.9-2.el9.x86\_64", "rpm-build-4.16.1-3-39.el9.x86\_64", "scap-workbench-1.2.1-13.el9.x86\_64", "xcb-util-renderutil-0.3.9-20.el9.0.1.x86\_64", "dwz-0.16-1.el9.x86\_64", "fonts-srpm-macros-1:2.0.5-7.el9.1.noarch", "go-srpm-macros-3.6.0-13.el9.7.noarch", "kernel-srpm-macros-1-0-14.el9.noarch", "ocaml-srpm-macros-6-6.el9.noarch", "openssh-askpass-8.7p1-47.el9.7.rocky.0.1.x86\_64", "perl-srpm-macros-1-41.el9.noarch", "python3-argcomplete-1.12.0-5.el9.0.1.noarch", "qt5-qtbase-gui-5.15.9-11.el9.6.x86\_64", "qt5-srpm-macros-5.15.9-1.el9.noarch", "rpmdevtools-9.5-1.el9.noarch", "xcb-util-image-0.4.0-19.el9.0.1.x86\_64", and "xcb-util-wm-0.4.1-22.el9.x86\_64". The "Warning:" column shows a warning about ignoring XDG\_SESSION\_TYPE=wayland on Gnome. The "Error:" column shows a message about the SCAP Workbench version and the OpenSCAP version. The right pane also displays a list of installed profiles, including "adwaita-gtk2-theme-3.28-14.el9.0.1.x86\_64", "efi-srpm-macros-6-4.el9.noarch", "gdb-minimal-16.3-2.el9.x86\_64", "gtk2-2.24.33-8.el9.x86\_64", "libcanberra-gtk2-0.30-27.el9.x86\_64", "openblas-srpm-macros-2-11.el9.noarch", "patch-2.7.6-16.el9.x86\_64", "pyproject-srpm-macros-1.16.2-1.el9.noarch", "qt5-qtbase-5.15.9-11.el9.6.x86\_64", "qt5-qtdeclarative-5.15.9-3.el9.x86\_64", "redhat-rpm-config-210-1.el9.noarch", "rust-srpm-macros-17-4.el9.noarch", "xcb-util-keysyms-0.4.0-17.el9.x86\_64", "zstd-1.5.5-1.el9.x86\_64", "debugedit-5.0-11.el9.x86\_64", "elfutils-0.193-1.el9.x86\_64", "ghc-srpm-macros-1.5.0-6.el9.noarch", "ibus-gtk2-1.5.25-6.el9.x86\_64", "lua-srpm-macros-1-6.el9.noarch", "openscap-utils-1:1.3.13-1.el9.7.rocky.0.1.x86\_64", "pcre2-utf16-10.40-6.el9.x86\_64", "python-srpm-macros-3.9-54.el9.noarch", "qt5-qtbase-common-5.15.9-11.el9.6.noarch", "qt5-qtxmlpatterns-5.15.9-2.el9.x86\_64", "rpm-build-4.16.1-3-39.el9.x86\_64", "scap-workbench-1.2.1-13.el9.x86\_64", "xcb-util-renderutil-0.3.9-20.el9.0.1.x86\_64", "dwz-0.16-1.el9.x86\_64", "fonts-srpm-macros-1:2.0.5-7.el9.1.noarch", "go-srpm-macros-3.6.0-13.el9.7.noarch", "kernel-srpm-macros-1-0-14.el9.noarch", "ocaml-srpm-macros-6-6.el9.noarch", "openssh-askpass-8.7p1-47.el9.7.rocky.0.1.x86\_64", "perl-srpm-macros-1-41.el9.noarch", "python3-argcomplete-1.12.0-5.el9.0.1.noarch", "qt5-qtbase-gui-5.15.9-11.el9.6.x86\_64", "qt5-srpm-macros-5.15.9-1.el9.noarch", "rpmdevtools-9.5-1.el9.noarch", "xcb-util-image-0.4.0-19.el9.0.1.x86\_64", and "xcb-util-wm-0.4.1-22.el9.x86\_64".

I also downloaded the SCAP benchmark content so it could be used with a graphical tool for easier scanning. The benchmark file contains several profiles, including the CIS benchmarks for RHEL-based systems like Rocky Linux 9. By installing this content, the profiles can be loaded into a GUI tool such as SCAP Workbench, which makes it easier to run scans and review the results visually.

After running both scans, I noticed that the results were different because each guideline uses its own set of security rules. The Security Technical Implementation Guide (STIG) from the Defense Information Systems Agency gave my system a compliance score of 37.62%, while the CIS Benchmark from the Center for Internet Security showed a score of 0%. Even though both scans evaluated the same Rocky Linux system, they measure different security controls and calculate scores differently. This shows how different security frameworks can produce very different results when assessing the same system configuration.
